

Location:
Netherlands

Building area:
90 square meters

Building Type:
Studio

Status:
Under Construction

Main Work includes:
DO set, 2D Drawings, 3D Model, Detailing, Make Image.

The roof of this pavilion seems to be complex and dynamic, but there are some rules the geometry. The basic volume was a cube with one corner chopped out, then the cube was duplicated four times and rotated 90/180 degree. The highest point of each cube was connected, thus generating the roof lines which seems quite complex.
